

A GUIDE TO THE UAE

Etihad Museum, Dubai, United Arab Emirates

THE UNITED ARAB EMIRATES

The United Arab Emirates is a country with modern and inspiring architecture and a story that tells about prosperity and innovation. This modern nation has attracted architects, innovators, and some of the world's best builders for decades, making it a hub of architectural marvels.

The modern story of the UAE inspires us further. This cosmopolitan nation – which includes major cities like Dubai and Abu Dhabi, as well as one of the world's busiest ports – is the engine of the region's economy and underpins its economic, financial, industrial, political, cultural, and maritime life.

With a rapid urbanization rate and a growing population, attracting millions of tourists annually, sustainable construction in the UAE isn't just important – it's imperative.

Driven by our vision to be the leading partner for sustainable construction, Holcim is helping the UAE build in a way that is circular, low-carbon, climate-resilient, energy-efficient, and smart. With our high-value building solutions – serving customers across the built environment, from infrastructure and industry to buildings – we are helping the UAE build icons of sustainable construction.

As both new builds and renovation projects, these iconic projects represent Holcim's innovative and sustainable building solutions in action, as the UAE inspires us to follow our purpose of building progress for people and the planet.

BUILDING PROGRESS ACROSS THE UAE
